### Response Parameters:

*allowed\_resize\_without\_reboot* – true if resizing CPU & RAM is allowed without restarting the storage server backed up

*allowed\_hot\_migrate* – true if hot migration is allowed for the storage server backed up

*allowed\_swap* – true if swap disk is allowed for storage server backed up, otherwise false

*backup\_server\_id* – the ID of the backup server on which the backup is stored

*backup\_size* – the disk space taken by this backup in kB

*backup\_type* – normal or incremental

*built* – true if the storage server backed up has been built

*built\_at* – the date when the disk backup was built

*created\_at* – the date when the record in the database was created

*updated\_at* – the date when this record in database was updated

*data\_store\_type* - data store type: lvm, vmware or solidfire

*id* – the ID of this backup

*identifier* - disk identifier

*image\_type* - backup type (currently only *tar* is available)

*initiated* - period when backup is initiated: days, weeks, months, or years

*locked* – true if the storage server backed up has been locked

*marked\_for\_delete* – the backup is marked for deletion (for auto-backups)

*min\_disk\_size* – the minimum disk size

*operating\_system\_distro* – the OS distribution of the storage server backed up

*operating\_system* – the OS of the storage server backed up

*target\_id* - ID of a backup target

*target\_type* - target for which the backup was taken; For normal backups it is a disk. For incremental backups it's virtual server.

*template\_id* – the ID of a template from which the storage server backed up was built

*user\_id* - the ID of a user the storage server belongs to

*volume\_id* - data store ID
